

Telco: Maungatapere to Dargaville

Distance: 45km

Location: Maungatapere to Dargaville

Scope:

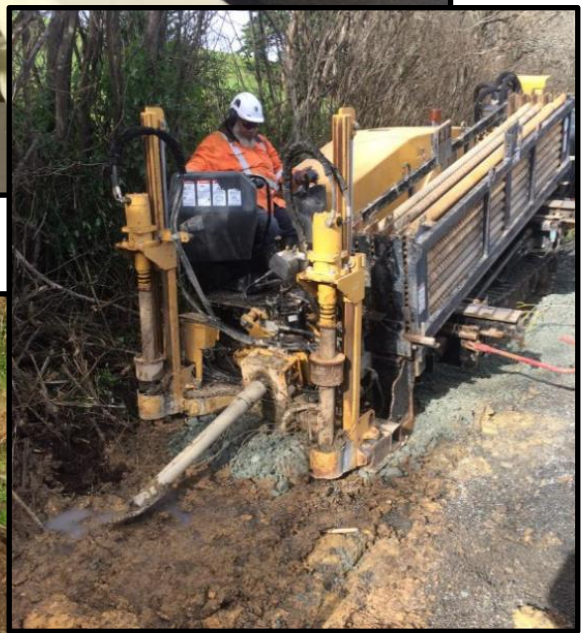

This project entailed the installation of:

- 45km of 2 x 32mm ducts
- 40 manholes
- 12+3way multiducts

Achievements:

- Working with a challenging site with windy and narrow roads. This required intense traffic management and NZTA conducted several audits with very positive feedback.
- Managing up to 8 worksites operating simultaneously across the project while minimising impact to local residents through traffic management and working with the local council.
- Installing pipe and brackets on 9 bridges, total length of 560m.
- The 2017 winter was one of the wettest on record which meant it was hard to meet the required productivity targets and deadlines. On project completion, the deadlines and customer requirements were exceeded.
- Managed 4 subcontractors of which 3 were local companies. Whenever possible, Connect 8 promotes giving back to the local community.

Sika manholes being installed
