

# Mobile: New Build Cellular Towers

**Location:** Auckland

**Scope:**

To replace the existing cellular tower (or light pole) with a new cellular site.

**Achievements:**

- Seamless coordination with multiple vendors for the supply of concrete work, temporary traffic management, equipment and testing.
- To make things quicker and easier, new build cellular towers are assembled and tested at the Connect 8 headquarters in Mt Wellington and then transported to their destination.
- We have consistently delivered projects ahead of schedule. We have access to a fleet of designated Ranger Utes that are fitted with state of the art test equipment and facilities. Another reason for our efficiency is good old hard work 😊
- Connect 8 has sourced competent skilled and passionate people who are very talented to complete these complex mobile projects.
- We manage adverse weather conditions by good planning and re-organising the schedule to complete multiple sites and keep the projects' momentum going.

Installation of a new control cabinet on Waiheke Island
